

## How To: Connect your USB drive after boot-up

You can connect and share one or two USB drives.

If you did not connect your USB drive/s or there is a problem detecting them, the setup wizard will guide you.

Click on No if you haven't connected any USB drives yet.

Connect one or two USB drives that you want to share. Use the “Blue” ports on your Raspberry Pi for USB3 drives and click the ‘Reboot Now’ Button.
